School is in Session: These Are the Top 15 Interior Design Styles to Know Now

Some design styles can be self-explanatory—like bohemian, for instance. But some of the most in-demand and influential design styles of the decade require a bit more explanation...and when a new look borrows from other more established styles or puts a fresh spin on a well-loved classic, things only get more complicated from there. (We're looking at you, "Scandi-Bohemian".)

If you're finding yourself struggling to tell a minimalist interior from a midcentury one, we're here to help. While the lines aren't always so cut-and-dry—midcentury style, for instance, often leans heavily on what Scandi designers were doing in that time period—there are a few main tenets of each interior style that can help you ID even the most eclectic home. But really, when all else fails, just remember that "eclectic" itself is a perfectly acceptable label.

More elevated and refined than the "shabby chic" trend of the past, this look draws from similar sources of inspiration but infuses new life into classic fabrics, patterns and silhouettes by mixing them in a unique way. Expect to see ditsy florals alongside antique pieces and lush materials in a bouquet of femme hues.

"I'm still attracted to (and loving) the classics like channel-backed puffy upholstery, and historical but re-colored or re-scaled florals," says Boston-based designer Liz Caan. "There is something comforting about the past right now—The past is known and familiar, so I am excited about updated chintzes that I can have quilted, glamorous channel tufting, natural materials like cane and rattan that may be trendy at the moment have stood the test of time and require skills to weave and manipulate, and hand-painted wallpapers and blocked fabric based on historical patterns."

Though this look is decidedly feminine, it's much less delicate than its foremothers thanks to an eclectic array of prints and bold colorways.
